

Placement Simulator - Interview Report

Role: SDE
Category: dsa
Difficulty: easy

Scores

overall: 85/100
technical: 88/100
communication: 80/100
confidence: 85/100
problemSolving: 90/100
coding: 85/100

Strengths

- Implemented correct and efficient solutions for all three problems.
- Used classic two pointer technique for cycle detection.
- Handled case insensitivity and non alphanumeric characters in palindrome check.
- Applied stack logic correctly for balanced parentheses.

Weaknesses

- Did not provide explanatory reasoning for the cycle detection solution.
- Missing code implementation for the balanced parentheses question.
- No discussion of time/space complexity or edge case handling in any answer.

Suggestions

- Include a brief explanation of the algorithm before presenting code.
- Provide code for every coding question, even if the logic is simple.
- Add a complexity analysis and mention potential edge cases.

Summary

The candidate delivered correct, efficient solutions for all problems, demonstrating solid technical knowledge and problem solving skills. However, the lack of explanatory detail for the first answer and the absence of code for the third question indicate room for improvement in communication and completeness. With clearer explanations, complexity analysis, and consistent code provision, the candidate would present an even stronger interview performance.
