

Placement Simulator - Interview Report

Role: SDE
Category: web-dev
Difficulty: medium

Scores

overall: 45/100
technical: 35/100
communication: 45/100
confidence: 70/100
problemSolving: 0/100
coding: 0/100

Strengths

- Provides concise responses

Weaknesses

- Major misunderstandings of core authentication concepts
- Incorrect claims about JWT and session storage
- Misuse of useEffect and dependency array
- Wrong explanation of MongoDB embedding vs referencing
- Lack of depth and supporting details

Suggestions

- Review fundamentals of session-based vs JWT authentication, including security trade-offs and storage mechanisms.
- Study React useEffect usage patterns, especially dependency array rules and side effect management.
- Learn MongoDB data modeling: when to embed versus reference, and clarify that references do not auto join.
- Practice explaining concepts with concrete examples to improve clarity and accuracy.

Summary

The candidate demonstrates a tendency toward concise but inaccurate answers, with significant misunderstandings of key web development concepts. Confidence is high, yet technical correctness and depth are lacking. Focused study on authentication mechanisms, React hooks, and MongoDB data modeling is recommended to strengthen foundational knowledge.
