

Placement Simulator - Interview Report

Role: SDE
Category: dsa
Difficulty: medium

Scores

overall: 55/100
technical: 45/100
communication: 48/100
confidence: 35/100
problemSolving: 40/100
coding: 0/100

Strengths

- Attempted to answer all questions
- Demonstrated basic understanding of bipartite graph concept

Weaknesses

- Incomplete and incorrect implementation of queue with two stacks
- Missing edge case handling in BST validation
- Low confidence and vague explanations
- Lack of detailed reasoning and depth

Suggestions

- Review stack-based queue implementation and amortized analysis
- Study BST validation with subtree constraints
- Practice articulating step-by-step solutions
- Work on confidence and clarity in explanations

Summary

The candidate provided surface level answers to all questions but lacked depth, correctness, and confidence. While they showed some conceptual awareness of bipartite graphs, their explanations for the two stack queue and BST validation were incomplete and technically inaccurate. Improvement should focus on detailed reasoning, correct algorithmic steps, and clearer, more confident communication.
