

Placement Simulator - Interview Report

Role: Engineer
Category: core-cs
Difficulty: easy

Scores

overall: 55/100
technical: 60/100
communication: 55/100
confidence: 50/100
problemSolving: 40/100
coding: 0/100

Strengths

- Clear and correct explanation of primary and foreign keys.

Weaknesses

- Incomplete and superficial explanation of URL resolution process.
- Confusion between inheritance and polymorphism in OOP.
- Low confidence and uncertainty in answers.

Suggestions

- Review the full client server request cycle and practice explaining each step.
- Study OOP concepts again, focusing on the distinct roles of inheritance, polymorphism, encapsulation, and abstraction.
- Practice answering questions with more detail and assertiveness to improve confidence.

Summary

The candidate shows solid knowledge of relational database keys but struggles with network fundamentals and core object oriented concepts. Answers are often brief and lack depth, and the candidate expresses uncertainty. Focused study of web request flow and OOP principles, coupled with practice in articulating explanations, would strengthen overall performance.
