

Placement Simulator - Interview Report

Role: SDE
Category: core-cs
Difficulty: easy

Scores

overall: 69/100
technical: 65/100
communication: 73/100
confidence: 85/100
problemSolving: 60/100
coding: 0/100

Strengths

- Clear and confident explanation of LEFT JOIN and INNER JOIN
- Good clarity in SQL join examples
- Consistent and decisive communication style

Weaknesses

- Incomplete and vague explanation of process vs thread
- Missing key concepts in OS such as context switching, isolation, and memory management
- Incorrect or oversimplified descriptions of OOP principles (encapsulation, inheritance, polymorphism, abstraction)
- Lack of depth and precision in technical answers

Suggestions

- Review operating system fundamentals, focusing on process/thread lifecycle, scheduling, and memory usage
- Study object oriented design principles with concrete, detailed examples
- Practice articulating concepts with more technical detail and correct terminology
- Include trade off discussions (e.g., thread overhead vs. process isolation) to demonstrate deeper understanding

Summary

The candidate demonstrates solid knowledge of SQL joins and communicates confidently, but exhibits significant gaps in operating system and object oriented programming concepts, indicating a need for deeper study and more precise technical articulation.
