

# Placement Simulator - Interview Report

Role: SDE  
Category: dsa  
Difficulty: easy

## Scores

overall: 92/100  
technical: 93/100  
communication: 90/100  
confidence: 91/100  
problemSolving: 92/100  
coding: 90/100

## Strengths

- Accurately implements the two sum algorithm with a hash map and clearly states time/space complexity.
- Provides a concise, well structured explanation of Floyd's cycle finding algorithm, including intuitive reasoning.
- Describes a two pointer palindrome check that correctly handles case and non alphanumeric characters.

## Weaknesses

- Minimal discussion of edge cases or alternative approaches (e.g., two sum with sorting, cycle start detection).

## Suggestions

- When answering, briefly mention potential edge cases or trade offs to demonstrate deeper analysis.
- Consider discussing alternative solutions or optimizations to show breadth of knowledge.

## Summary

The candidate consistently delivered correct, well structured answers with strong technical depth and clear communication. Minor gaps in discussing edge cases and alternative strategies are noted, but overall performance is strong and suitable for an SDE role.
