

Placement Simulator - Interview Report

Role: SDE

Category: dsa

Difficulty: easy

Scores

overall: 88/100

technical: 92/100

communication: 90/100

confidence: 88/100

problemSolving: 90/100

coding: 0/100

Strengths

- Accurate use of hash map for frequency counting and two-sum problem
- Correct application of stack for balanced parentheses
- Clear explanation of time and space complexities
- Concise yet complete answers

Weaknesses

- No discussion of edge cases or potential pitfalls
- No demonstration of actual code or implementation details

Suggestions

- Include brief code snippets or pseudocode to showcase coding style
- Explain edge cases (e.g., empty string, all repeating characters, nested brackets)
- Discuss trade offs such as space vs. time for the two sum approach

Summary

The candidate delivered technically sound, concise answers with correct algorithmic choices and complexity analysis. While the responses lacked discussion of edge cases and did not include code, the overall performance indicates strong foundational knowledge and clear communication.
