

Placement Simulator - Interview Report

Role: SDE

Category: system-design

Difficulty: easy

Scores

overall: 65/100

technical: 65/100

communication: 60/100

confidence: 55/100

problemSolving: 50/100

coding: 0/100

Strengths

- Clear and correct explanation of load balancing concepts and common algorithms.
- Demonstrated confidence and concise communication in the first answer.

Weaknesses

- Limited depth and missing key concepts in caching discussion (e.g., cache invalidation, TTL).
- Very brief and unsupported answer for database choice, lacking reasoning or trade off analysis.
- Inconsistent confidence across answers, dropping sharply on the last question.

Suggestions

- When asked about caching, include details on cache invalidation strategies, consistency models, and typical TTL values.
- For database selection, outline data model, transaction requirements, scalability needs, and how those map to relational vs. document stores.
- Practice articulating trade offs and reasoning steps to maintain confidence throughout the interview.

Summary

The candidate displays solid foundational knowledge of load balancing and a basic grasp of caching, but falls short on depth and reasoning for database selection. Confidence is uneven, and problem solving evidence is minimal. Focus on elaborating trade offs and detailed explanations in future interviews.
