

Placement Simulator - Interview Report

Role: SDE

Category: dsa

Difficulty: easy

Scores

overall: 90/100

technical: 90/100

communication: 92/100

confidence: 91/100

problemSolving: 90/100

coding: 90/100

Strengths

- Consistently applied correct, efficient algorithms for all three problems.
- Provided clear, concise explanations that directly addressed the questions.
- Demonstrated confidence and decisiveness in communication.
- Implemented a correct and idiomatic solution for the Two Sum problem.

Weaknesses

- Did not discuss time and space complexity for the Two Sum solution.
- Lacked mention of edge case handling (e.g., null or empty inputs).

Suggestions

- Include explicit complexity analysis ($O(n)$ time, $O(n)$ space) when presenting algorithmic solutions.
- Briefly address potential edge cases or input validation to show robustness.
- When coding, comment on key steps to aid readability and maintainability.

Summary

The candidate showcased strong technical knowledge and effective communication across all questions. While the solutions were correct and well structured, the absence of explicit complexity analysis and edge case discussion slightly lowered the overall score. With minor improvements in these areas, the candidate would be an excellent fit for an SDE role.
