

Placement Simulator - Interview Report

Role: SDE
Category: dsa
Difficulty: easy

Scores

overall: 78/100
technical: 78/100
communication: 80/100
confidence: 73/100
problemSolving: 78/100
coding: 0/100

Strengths

- Demonstrated solid understanding of classic algorithmic techniques such as two-pointer and hash map approaches.
- Provided clear, concise explanations for each problem.
- Showed confidence in handling balanced parentheses and palindrome checks.

Weaknesses

- Lacked detail on edge case handling and duplicate scenarios in the two sum solution.
- Inconsistent confidence levels across questions.
- Did not discuss potential trade offs or alternative approaches.

Suggestions

- Practice articulating edge case considerations and constraints for each algorithm.
- Maintain consistent confidence by rehearsing explanations for all problem types.
- Explore and mention alternative solutions (e.g., two sum with sorting) to demonstrate depth.

Summary

The candidate shows strong foundational knowledge of common data structure problems and can articulate standard solutions clearly. However, they occasionally omit important edge case considerations and exhibit uneven confidence. With focused practice on edge cases and consistent communication, they would be a solid fit for an entry level SDE role.
