

Placement Simulator - Interview Report

Role: SDE
Category: core-cs
Difficulty: easy

Scores

overall: 84/100
technical: 83/100
communication: 92/100
confidence: 93/100
problemSolving: 75/100
coding: 0/100

Strengths

- Accurate and concise explanation of primary, candidate, and foreign keys
- Clear differentiation between INNER JOIN and LEFT JOIN with relevant examples
- Confident and structured delivery throughout the interview

Weaknesses

- Incomplete description of the web page loading process
- Missing critical steps such as TCP three way handshake, SSL/TLS negotiation, HTTP response handling, and rendering pipeline
- Limited demonstration of problem solving or analytical reasoning beyond recall

Suggestions

- Provide a full, step by step walkthrough of web page loading, covering DNS caching, TCP handshake, SSL/TLS handshake, HTTP request/response cycle, and rendering stages
- Practice explaining complex processes in a structured manner, using diagrams or examples to illustrate each phase
- Showcase analytical thinking by breaking down problems, evaluating trade offs, and explaining why a particular solution is chosen

Summary

The candidate demonstrates strong technical recall and clear communication for database concepts and SQL joins, delivering answers with confidence. However, the explanation of the web page loading process is incomplete, missing several key networking and rendering steps. Overall performance is solid, with room for improvement in depth of process explanations and problem solving demonstration.
