

Placement Simulator - Interview Report

Role: SDE

Category: dsa

Difficulty: easy

Scores

overall: 88/100

technical: 90/100

communication: 88/100

confidence: 80/100

problemSolving: 90/100

coding: 0/100

Strengths

- Accurately identifies appropriate data structures for each problem (stack, two-pointer, hash map).
- Provides clear, step-by-step explanations of the algorithms.
- Correctly analyzes time and space complexity for each solution.

Weaknesses

- Does not discuss edge cases such as empty strings or duplicate elements.
- Confidence level dips slightly on the two sum question.
- No coding implementation was demonstrated.

Suggestions

- Include brief discussion of edge cases and potential pitfalls in each solution.
- Practice writing full code snippets to reinforce confidence and coding skills.
- Maintain consistent confidence across all answers by rehearsing explanations.

Summary

The candidate consistently applied correct data structures and algorithms, provided clear explanations, and accurately analyzed complexity. Minor gaps include lack of edge case discussion and no coding demonstration. Overall, the performance is strong, with room to improve confidence consistency and coding practice.
