

Placement Simulator - Interview Report

Role: SDE
Category: dsa
Difficulty: easy

Scores

overall: 80/100
technical: 85/100
communication: 70/100
confidence: 70/100
problemSolving: 75/100
coding: 0/100

Strengths

- Accurately identified and explained standard algorithms for cycle detection, palindrome checking, and balanced parentheses.
- Provided correct time and space complexity analysis for cycle detection and palindrome questions.

Weaknesses

- Limited detail and edge case handling in the balanced parentheses solution.
- Confidence appeared lower for the third question.
- Lacked deeper reasoning or trade off discussion.

Suggestions

- Practice elaborating on edge cases and error handling in stack based solutions.
- Work on articulating confidence and reasoning steps more clearly.

Summary

The candidate shows strong technical knowledge on common data structure problems, correctly applying standard algorithms and providing complexity analysis. However, the balanced parentheses answer lacked depth and confidence, indicating room for improvement in communication and thoroughness.
