Placement Simulator - Interview Report

Role: SDE
Category: system-design
Difficulty: easy

Scores

overall: 85/100
technical: 88/100
communication: 86/100
confidence: 90/100
problemSolving: 80/100
coding: 0/100

Strengths

- Comprehensive coverage of caching layers and invalidation strategies
- Clear, structured explanations for load balancing and API design
- Consistent use of examples and bullet points to enhance readability
- Demonstrated confidence and decisiveness throughout the answers

Weaknesses

- Omitted discussion of advanced caching concerns such as cache stampede and warming
- Did not mention health check mechanisms or session persistence details for load balancers
- API design answer lacked mention of idempotency and rate limiting considerations
- No coding or algorithmic problem solving was demonstrated

Suggestions

- Include advanced caching patterns (e.g., cache stampede prevention, cache warming) in future answers
- Explain health check and graceful degradation strategies for load balancers
- Add discussion of idempotency, rate limiting, and security best practices in API design
- Prepare a small coding or algorithmic example to showcase problem solving skills

Summary

The candidate provided technically sound, well structured answers with strong communication and confidence. Minor gaps exist in advanced topics and lack of coding demonstration, but overall performance is strong and suitable for an SDE role.
